Education

Marshall University Bachelor of Science Expected December 2025 Cumulative GPA:3.4

Major: Computer Science

Professional Summary

Aspiring Software Developer and Military Veteran with a proven track record of leading teams, managing high-value technical systems, and delivering exceptional customer service in both operational and retail environments. Adept at fostering wellness and morale, coordinating maintenance of complex radar and communications systems, and training personnel in hands-on technical and field skills. Demonstrated success in logistics, smart home technology, and e-commerce fulfillment, with a reputation for efficiency, reliability, and a results-driven mindset. Holds a Secret Security Clearance and brings a well-rounded, solutions-oriented approach to dynamic work environments.

Skills

- Java, IntelliJ IDEA
 - Python, Java, C++,
 - Visual Studio code, PyCharm, IntelliJ
 - Data Structures
 - Effective communication
 - Linux, Windows, Mac
 - Object Oriented Development
 - HTML, CSS, JavaScript, React.js
 - .NET (C#), REST API Development
 - MySQL, SQL Server
 - Designed and built 9 different Computers as a personal interest.
 - SQL Server Management Studio
 - SQL Workbench, PorkBun
 - GitHub, Netlify, Stripe
 - AWS, PuTTY, WinSCP
 - Microsoft Office Suite 365
 - Canva, Figma,
 - Google Docs, SharePoint
 - NMAP, Kali Linux, Wireshark
 - Management skills
 - Team Orient
-

Professional Experience

Senior Radar Operator: Army

November 2015 – May 2019

- Managed a small team promoting moral and physical health while performing daily duties.
- Facilitated the maintenance of 18 million dollars worth of highly sensitive equipment.
- Trained soldiers on AN/TPQ-53 R.A.D.A.R. system operations, map reading, vehicle PCMS, and NVG operation.

DNS Technician: Dish Network

December 2019 - March 2021

- Installed satellite dishes and troubleshooted cable issues for customers during their time of need.
- Guided customers in selecting the ideal smart home solutions tailored to their needs.

Personal Shopper: Walmart

May 2019 – December 2019 April 2021-August 2022

- Selected and quality-checked items for customers during online grocery orders.
- Maintained accurate inventory levels, restocking shelves efficiently, and visual merchandising.

Projects

Python Hangman Game – Introductory Programming Project

- Programmed a command-line Hangman game in Python as an introductory project to explore fundamental programming concepts. This early work laid the groundwork for subsequent projects in advanced programming languages.

Java Hangman Game with GUI – Object-Oriented Programming Project

- Designed and implemented an interactive Hangman game in Java, featuring a custom user interface built with JFrame. Incorporated object-oriented programming principles to ensure a robust and user-friendly gaming experience.

Java Bank Application – Data Structures Project

- Engineered custom data structures (linked lists, AVL trees, etc.) within a Java bank application to streamline record management, enabling sophisticated sorting, searching, and merging operations via a console interface.

Portfolio Website – GitHub, Single Page Application (SPA) Development, Frontend Development

- **SPA Architecture:** Implemented as a single-page application for seamless user experience and dynamic content loading.
- **Technological Stack:** Utilized HTML, CSS, and JavaScript for robust frontend development.
- **Hosting and Version Control:** Hosted on GitHub Pages, demonstrating proficiency in using GitHub for version control and deployment.
- **Interactive Contact Form:** Integrated a contact form to facilitate professional connections and inquiries.

Research/Development AI-based Education System – AI, Machine Learning, and Web Development Project

- **Entrance Exam Generator:** Utilizes OpenAI's API to generate custom review recommendations based on specified criteria.
- **Interactive Question Bot:** Provides real-time assistance on Python-related queries, enhancing student engagement and understanding.
- **Personalized Quiz Grader:** Employs OpenAI's API to offer detailed, personalized feedback on quiz submissions, supporting adaptive learning strategies.
- **Hosting of the website:** Managed the deployment of the website on AWS using EC2, with PuTTY and WinSCP for server management and file transfers.

Freelance Website Development Studio – React Frontend Project

- **SPA Architecture:** Responsive single-page React project with multiple routed views using React Router
- **Custom Contact Form:** Integrated a custom-built contact form using EmailJS to send inquiries directly to my email without a backend server
- **Styling and Components:** Used modular components and custom CSS to create a responsive, mobile friendly layout across the entire application.
- **Deployment:** Hosted the website on Netlify with the use of environment variables for secure form handling and site metadata

Healthcare System – Full Stack Web Application (Academic Project)

- **Role-Based Architecture:** Designed a medical management system with dynamic views and permissions for doctors, patients, and administrators.

- **Authentication and Session Management:** Implemented secure login, logout, and password recovery with role validation and session handling
- **Messaging and prescriptions:** Built backend CRUD functionality for message storing and prescriptions tracking, with tailored frontend pages for each user role.
- **UI Components:** Built a shared, modular sidebar with dynamically rendered content based upon user role and updated across all pages automatically. Also responsive top navigation bar.
- **Data layer:** Initially built using SQL Server and SSMS, later migrated to MySQL for broader compatibility. Integrated with a .NET web API for secure and efficient communication between frontend and backend
